THE PAST, THE PRESENT AND THE FUTURE OF THE ARTIFICIAL GROUND AREAS ON COAST KAMA RESERVOIRS

N.N. Nazarov

Perm state university

Existential features of formation of two groups of the artificial ground areas on coast Kama reservoirs are considered. The first group are the sites of coast generated within the limits of coastal slopes as a result of accumulation and fastening artificial or natural ground. The second group - the sites of coast separated by dams from water area of water basins with absolute marks of a level of a surface below a normal retaining level.
